

Making buildings energy efficient with energy funding available

How can Revolution Power help you?

We survey your building to establish which energy saving measures are appropriate to you. We then fund the installation of these measures and project manage the work from start to finish to give you complete peace of mind. We use our buying power to make sure you have the best equipment available on the market and we look after the warranty and maintenance for the length of the shared energy savings agreement, so you have nothing to worry about. You will be able to realise your energy and cost savings opportunity without having to spend capital, and the fund repayments come from the energy savings so in effect it costs you nothing.

How does the agreement work?

Our agreement is bespoke to you and the energy saving measures that will give us both the best return in carbon and cost reductions. We give you a share of the energy savings from day one to improve your balance sheet and calculate the length of the agreement from the cost savings. Typically an agreement will run between 5 and 10 years. The agreement is a fixed service fee not a loan so it doesn't sit on your balance sheet.

How your project will run

- Step 1** We complete an energy audit of your buildings and a site survey for the relevant energy saving products.
- ↓
- Step 2** We calculate the energy savings and produce a shared energy savings agreement.
- ↓
- Step 3** We commission an independent third party energy audit to establish the baseline energy usage.
- ↓
- Step 4** We project manage the installation and commissioning of the energy saving measures from start to finish.
- ↓
- Step 5** We provide continuous assessment of your energy usage with our energy management system.

Carbon Reduction

- * Reduce your carbon footprint by up to 80%
- * Install modern energy efficient equipment and cut your wasted energy
- * Replace old inefficient equipment with modern technology
- * Gain certified carbon credits
- * Make your building more energy efficient

Our Technology

- * Biomass boilers reduce costs and carbon emissions and benefit from RHI scheme
- * LED lighting cuts energy costs by up to 70% and is more efficient and reliable
- * Solar PV generates free electricity and benefits from the FIT scheme
- * Energy management systems remove energy wastage and monitor usage 24/7

How the process works

Our survey will identify the cost savings with your buildings. Once we have agreed on the measures you want to fund and the project has been approved we will prepare a detailed proposal. Our proposal will identify your cost savings from day one along with the length of the agreement.

At the end of the agreement any remaining FIT or RHI payments will be assigned to you along with full ownership of the assets we have installed. This will accelerate your energy savings for many years and help keep your fuel costs under control.

Is this offer open to anyone?

To qualify for funding you must meet the following criteria:

- * Have an energy spend of £30k+ per annum
- * Own your building or have the landlord's consent
- * Have been trading for at least 3 years
- * Willing to provide CEPC or DEC certificates or have them carried out

Frequently asked questions

How will I know how much money I will save?

Your proposal will highlight exactly how much energy and money you will save by installing energy saving technology. We will also show you how this will impact your energy spend over the next 20 years.

How long will it take to repay the fund?

Every project is bespoke, it depends on which technology we use but as a rule of thumb most projects will be between 5 and 10 years.

Who owns the equipment?

During the period of the shared energy savings agreement the fund owns the equipment. At the end of the agreement the ownership is assigned to you. This is significant because you will still have many years of FIT or RHI payments as well as the savings to reduce your energy spend.
